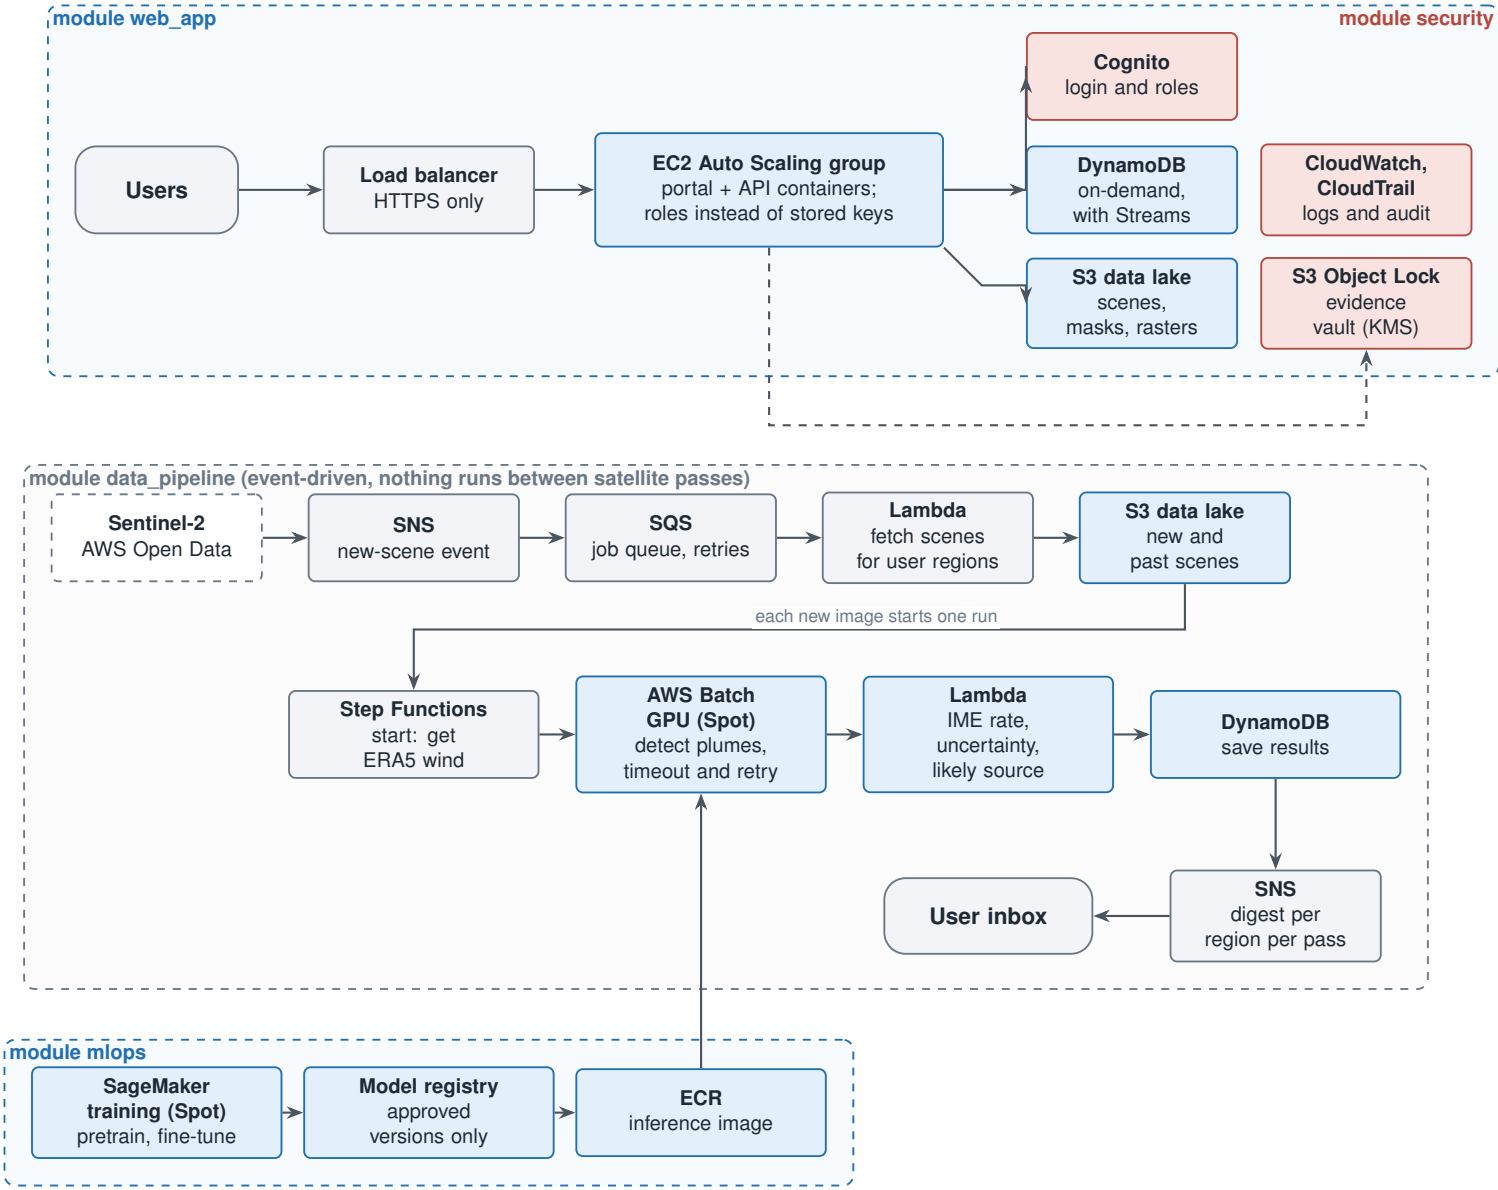
Idle cost stays near zero: the pipeline runs only when a new Sentinel-2 image arrives

Level 01 - AWS deployment, Beta scaffold. Terraform modules mirror report Figures 5.2.1 to 5.2.3. Dashed arrow: evidence written on export.



Budget guard (risk R17): run `terraform plan` and review cost-bearing resources before `apply`; GPU work is Spot with a timeout. Alpha does not deploy this stack. The security module owns Cognito, KMS keys, Object Lock and CloudTrail (red boxes). The 24 h notice target runs from satellite pass to notification and is a Beta target; the 15 min per-granule budget starts once all inputs are available (NFR1).
