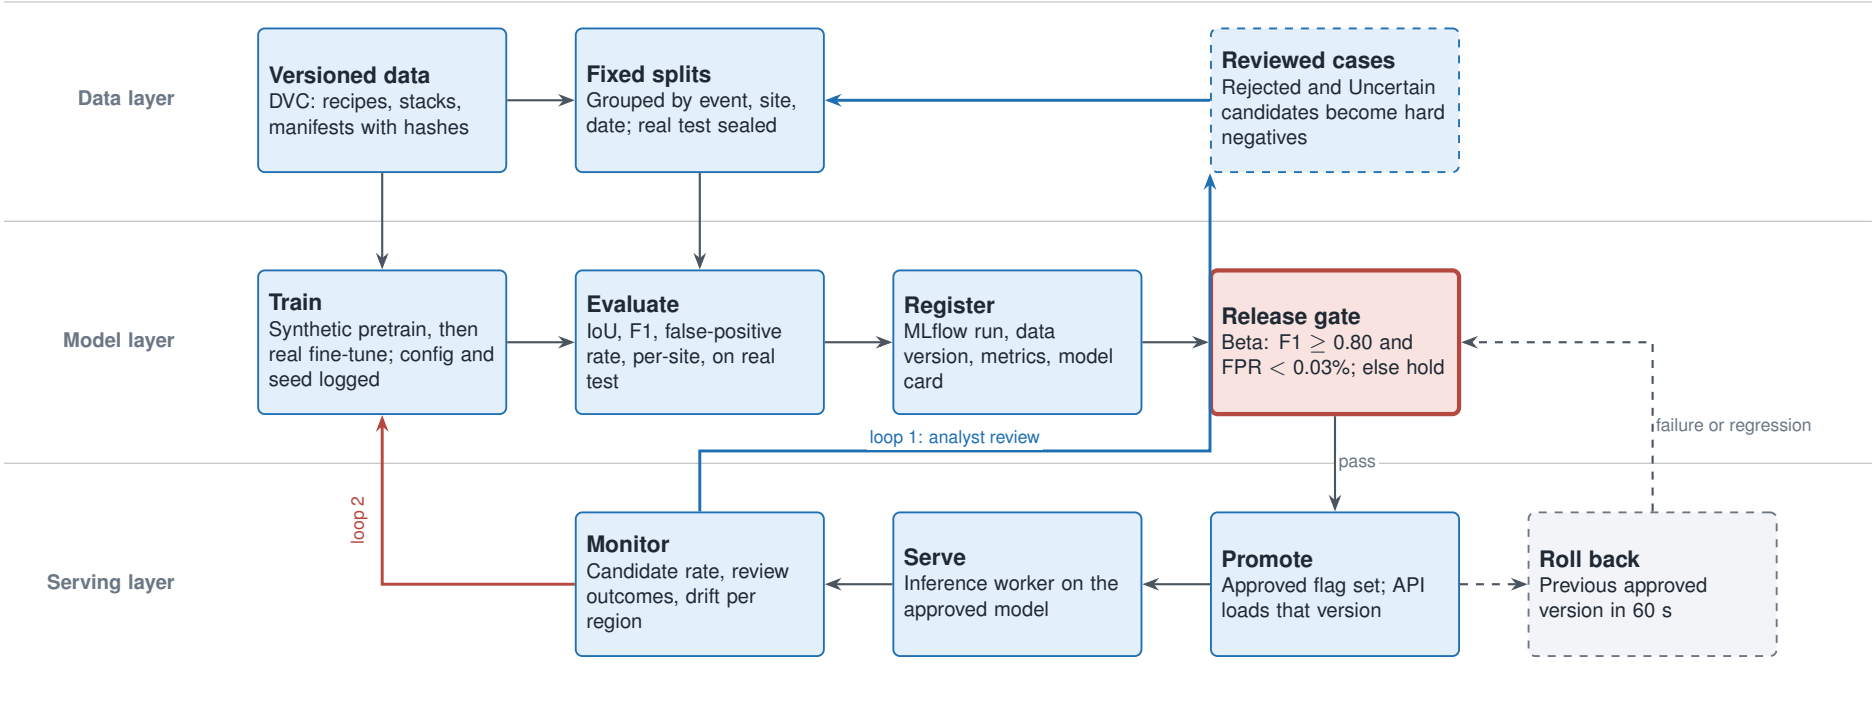
Two loops keep the model honest: analysts feed it, monitoring triggers it

Level 06 - lifecycle. Three layers, one gate. Loop 1 turns reviews into training cases; loop 2 retrains when monitoring shows drift or false alarms.



Alpha targets (IoU 0.70, F1 0.75) are research results to measure and report; the Beta gate decides promotion. The two are different and never interchangeable. Rollback in 60 s is a Beta target.
